

world class cabinetry

Paterson Dental made its name providing quality healthcare products that are fit for purpose and robust enough to stand the test of time. Our cabinetry is a case in point. Fundamental to every area of your practice – from reception to surgery and even sterilisation rooms – the cabinetry we provide is designed to improve both the look and efficiency of your work place.

Reception

First impressions matter. When a patient enters your practice, they need to feel comfortable, relaxed and confident that they're in a professional environment. As the administrative hub of the business, your reception also needs to be well organised and properly equipped. With years of experience designing and delivering beautiful reception areas, Paterson Dental understands how to deliver on both counts.

Sterilisation room

Paterson Dental has been installing sterilisation rooms in corporate and military settings for years, so when HTM 01-05 was introduced we were perfectly placed to meet the challenge of fitting them in high street practices too. Our design expertise means we can deliver sterilisation rooms that improve instrument processing flow, while our superior methods of construction ensure durability for years to come.

Surgery

Your working environment has to function perfectly, look great and stand up to the strain of daily use. Paterson Dental can help you achieve all of this, either working closely to a prescriptive brief or providing in-depth guidance at every stage if you're not so sure what's required. Either way, you'll benefit from our 38 years' experience of designing, building and installing outstanding dental cabinetry.

your practice made perfect

Depth of talent

Our cabinetry is designed, manufactured and installed by experts in their particular field. Time-served and passionate about their work, the craftspeople, design professionals and project managers we employ are conversant with current legislation, and can advise you on compliance issues or official guidelines that may impact your project. It's this combination of experience, knowledge and attention to detail that sets Paterson Dental apart.

Breadth of choice

Paterson Dental offers a comprehensive range of standard and bespoke cabinetry systems in a selection of high quality materials. From straight runs and traditional 'L' shaped systems, to 'dog legs' and more contemporary curved sets, we can tailor any design to your precise requirements. And by also offering a budget option with a smaller degree of choice, we can ensure that our quality remains affordable whatever your price point.

Quality products

All cabinetry is designed and built in our own manufacturing facility, using only the highest quality materials and components. By combining traditional craftsmanship with the latest CAD/CAM design and manufacturing techniques, we operate well within ISO9001:2000 Quality Standards to deliver cabinets that will provide years of trouble-free service. Even our 'budget' range comes with solid-backed carcasses, 170 degree hinges, moulded clinical drawers, steel handles and solid plinths.

Delivering what you want

Your input at the design stage of any project is vital, but it doesn't stop there. By investing in the latest 3D-modelling programs, we can bring your design to life in the virtual world, allowing you to view it from numerous angles. That way, you can make alterations and test them out before any physical building work even begins. It's all part of our commitment to making your practice perfect.
